

Meet Qwo™

collagenase clostridium histolyticum-aes

It's finally here! Introducing a groundbreaking injectable for moderate to severe cellulite on the buttocks of adult women. Get a glimpse at how it works.

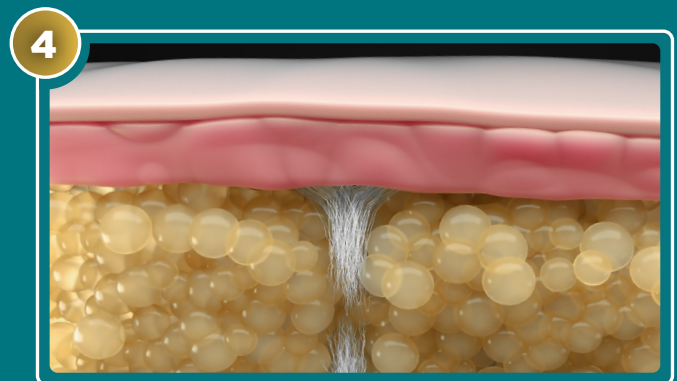

Under the surface of the skin is a pattern of fibrous bands that connect the skin to the muscle. Over time, some of these fibrous bands thicken, creating tension that pushes fat up. This causes the surface dimples commonly referred to as cellulite.

Collagenase clostridium histolyticum-aes, or QWO, is a mixture of two naturally occurring collagenase enzymes, AUX-I and AUX-II, that is injected into the skin under the dimple.

These enzymes target Type 1 and Type 3 collagen found in fibrous bands and work together to break down the buildup of collagen that causes cellulite.

When QWO is injected, the fibrous bands are broken. It is thought this may release the dimple and smooth the surface of the skin.

WHAT IS QWO?

QWO is a prescription medicine used to treat moderate to severe cellulite in the buttocks of adult women.

IMPORTANT SAFETY INFORMATION

Do not receive QWO if you: are allergic to collagenase or to any of the ingredients in QWO, or have an active infection at the treatment area.

QWO may cause serious side effects, including:

- allergic (hypersensitivity) reactions, including anaphylaxis. Call your healthcare provider right away if you have hives, trouble breathing, low blood pressure, swollen face, chest pain, dizziness or fainting after receiving QWO;
- injection site bruising

Before receiving QWO, tell your healthcare provider if you:

- have a bleeding problem
- are pregnant or may become pregnant, nursing or plan to nurse. You and your healthcare provider should decide if you will receive QWO or breastfeed.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins and herbal supplements. **Especially tell your healthcare provider if you take a medicine that prevents the clotting of your blood (antiplatelet or anticoagulant).**

The most common side effects of QWO include: injection site bruising, pain, areas of hardness, itching, redness, discoloration, swelling and warmth in the treatment area.

These are not all the possible side effects of QWO. Call your healthcare provider for medical advice about side effects. You are encouraged to report side effects of prescription drugs to the FDA at www.fda.gov/medwatch or 1-800-FDA-1088.
